                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a method for inducing apoptosis in mammalian CC cells which express the Apo-2 receptor protein (AAB73442, AAB73443). CC The method involves exposing the cells to an Apo-2 agonistic antibody, CC which induces Apo-2 receptor mediated apoptosis. The Apo-2 receptor CC consistence of the tumour concerns factor receptor (TNFR) family, and its natural ligand is the CC necrosis factor receptor (TNFR) family, and its natural ligand is the CC concerns factor receptor (TNFR) family, and its natural ligand is the CC to trigger caspase-dependent apoptosis, and is also able to activate CC NF kappa-B (nuclear factor Kappa B). The Apo-2 receptor is an approximately 45 kD type I transmembrane protein, and contains a death CC domain in the cytoplasmic region (residues 324-392). It exhibits considered the substitution of the apoptosis-linked receptor CC Significantly more sequence identity to the apoptosis-linked receptor CC CR which also binds Apo-2L, than other apoptosis-sosociated proteins. The Apo-2 receptor agonist monoclonal antibodies used in the method of the invention are 3F11.39.7, 3H3.14, 5, 3D5.1.10 and 3H1.18.10. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             method of the invention is used to induce apoptosis in Apo-2-expressing cells, particularly cancer cells. It may therefore be used for treating mammalian cancers, especially lung cancer, colon cancer and glioma. The present sequence represents human Apo-2 as given in figure 2A. Note: The present sequence differs from the human Apo-2 receptor precursor given in AAB73442 in that residue 410 of this sequence is Leu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Inducing apoptosis in mammalian cells for treating cancer, comprises exposing mammalian cells or cancer cells expressing Apo-2 receptor, Apo-2 agonist antibody -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    research reagents and materials for discovering treatments and diagnostics to animal and human diseases. The polypeptides may furth used as immunogens to produce antibodies immunospecific for the TR6 polypeptides. The polynucleotides may also be used as hybridization probes for cha and genomic DNA, for isolating full-length cDNAs and genomic clones encoding TR6 and of other genes having high sequence similarity to TR6 gene, and for chromosome identification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This represents a human tumour necrosis factor (TNF) related receptor, TR6. TR6 can be expressed by standard recombinant methodology. The TR6 polypeptides are useful for treating chronic and acute inflammation, rheumatoid arthritis, septicemia, autoimmune diseases (e.g. inflammatory bowel disease, psoriasis), transplant rejection, graft vs. host disease, infection, stroke, ischaemia, acute respiratory disease syndrome, asthma, restenosis, brain injury, AIDS (acquired immunodeficiency syndrome), bone diseases, cancer, atherosclerosis, and Alzheimer's disease. These may also be used to inhibit production of TNF-alpha and eicosanoids, as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New tumor necrosis factor related receptor TR6 polynucleotides polypeptides useful for e.g. for treating chronic and acute inflammation, arthritis, septicemia, autoimmune diseases, infectional acute inflammation arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cancer, bone diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    21-DEC-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (SMIK ) SMITHKLINE BEECHAM CORP

                                                                                                                                       δÃ
                                                                                                                                                                                                                                                                                                                                     The invention relates to a human tumour necrosis factor (TNF) related CC receptor, TR6. TR6 can be expressed by standard recombinant methodology. The TR6 polypeptides are useful for treating chronic and acute combinant relation, rheumatoid arthritis, septicemia, autoimmune diseases CC inflammation, rheumatoid arthritis, septicemia, autoimmune diseases (e.g. inflammatory bowel disease, psoriasis), transplant rejection, graft CC vs. host disease, infection, stroke, ischaemia, acute respiratory disease CC syndrome, asthma, restenosis, brain injury, AIDS, bone diseases, cancer, atherosclerosis, and Alzheimer's disease. These may also be used to CC inhibit production of TNF-alpha and elcosanoids, as research reagents and CC materials for discovering treatments and dispositics to animal and human CC diseases. The polypeptides may further be used as immunogens to produce CC antibodies immunospecific for the TR6 polypeptides. The polypucleotides CC may also be used as hybridization probes for CDNA and genomic DNA, for isolating full-length cDNAs and genomic clones encoding TR6 and of other CC genes having high sequence similarity to TR6 gene, and for chromosome CC identification. The present sequence represents a TR6-Ig fusion protein sequence where the N-terminal amino acids (1-184) of TR6 is fused to a CC factor Xa protease cleavage site and the hinge Fc region of a human CC crammal heavy chain
                                                                                                                                                                                 Query Match
